

Security and Quality Challenge

In automotive and logistics environments, security inspection alone is not sufficient.

The condition of the underbody (materials, surfaces, and components) must be visually assessable and documented without slowing down the process.

Color Inspection Solution

Auto²Scan Color extends automated under vehicle inspection with high-resolution color imaging.

The system supports security inspections and quality control within a single, continuous process.

Your Benefits

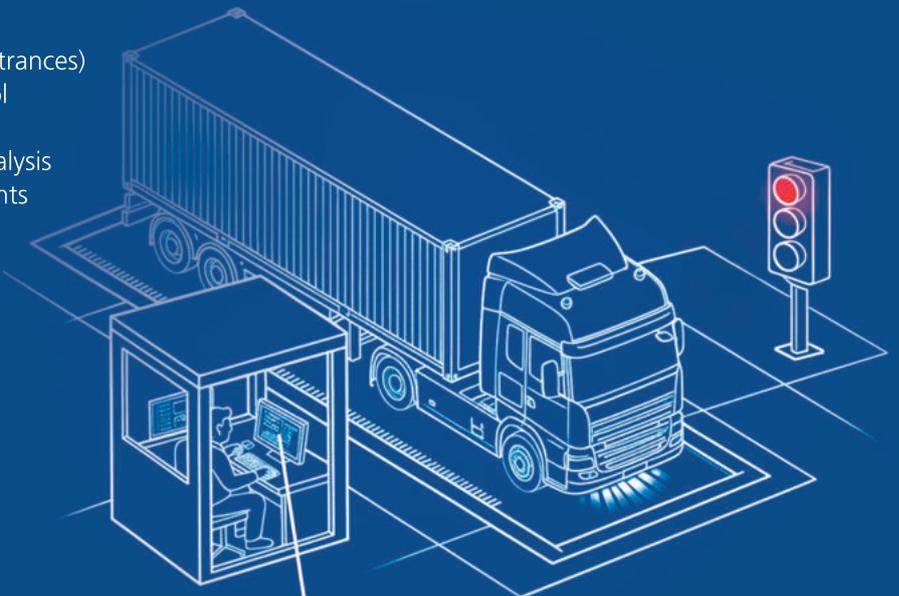

- Under vehicle inspection without lifting platforms
- Objective and traceable inspection results
- Audit-compliant documentation
- Early detection of deviations and damage
- High throughput with consistent inspection quality

- Visual underbody inspection in color
- High-resolution detailed inspection
- Human review with manual approval
- Optional license plate recognition (LPR), VIN/FIN, barcode

Areas of Application

- Automotive plants (end-of-line, plant entrances)
- Quality assurance and production control
- Vehicle logistics and handover points
- Audits, series monitoring, and claims analysis
- Vehicle inspections and expert assessments

Visual under vehicle inspection for security and quality
